

Flavin7® – Curative fruits

A four-inch-sized malignant tumour was found in the lung and liver of István Takács half a year ago. Then, besides chemotherapy he consumed flavonoids and fruit concentrates with vegetal immune substances. Practically, the tumour has vanished and there were hardly any side effects of chemotherapy. In fact, the young man began to put on weight in the meantime.

“During chemotherapy I meet many sick people, the young man says. They often ask how I feel and are quite amazed to hear that I feel better than they do. They say that when they get home after such a therapy they usually stay in bed or are nauseated, however, it does not apply to me. When I get home I have the same vitality I had at the beginning of the therapy.”

The 26-year-old sportsman is now healthy again.

The history of the flavonoids began with the discovery of it by our Nobel-prize winner scientist, Albert Szentgyörgyi in 1928. He called this substance *vitamin P* for its features of vitamin. At that time thousands of scientists, chemists and doctors studied these compounds and today we know of more than 4000 flavonoids as well as their biological effects.

The dramatic story of Mr. Szabó Snr. began 20 years ago. He had three cardiac infarcts and his blood-forming functions stopped. The only way to keep him alive was to supply him with blood every year. He was in hospital eight months a year but his son, László Szabó, wanted to help. As a teacher of mathematics and technology he spent the nights in his laboratory, which was formally the cellar. He was always interested in chemistry and this time he could not even stop reading technical books and encyclopaedias. He pressed fruits, cooked and condensed them; he wanted to save his father. Mr. Szabó Snr. is now 64 years old and he has not seen the doctor for years: he was cured. Nevertheless, László Szabó continued studying these natural substances for years to help others.

Then, due to further research a fruit concentrate was made, which contained flavonoids, antioxidants and vegetal immune substances. Shortly, the “cellar-lab” proved to be small and today the success of this fruit concentrate is getting greater and greater owing to the experience and work of almost one hundred doctors.

“We would not like to say it is a panacea, rather a substance that may considerably reduce the side effects of chemotherapy.”

Nearly one hundred county oncologists and GPs look after the flavonoid and resveratrol consumption of patients suffering from malignant tumours and they record the results. According to the observations the liquid proved to mitigate or even cease the symptoms (e.g. liver malfunction) of traditional treatments. It improves general feeling and state of health of the patient as well as it strengthens the immune system.

A patient with breast tumour, who could not be operated for her cardiac complaints drank this special fruit concentrate only beside hormone therapy. After three months her state was stabilized. Since then a year has passed and the tumour of 3 cm is only 14 mm now. And it is really hard to believe unless you see it for yourself that the metastatic lymphatic gland in the armpit is surrounded by a capsule or frame of 3 mm.

In order to summarize all knowledge a large-scale conference was summoned in Szolnok where doctors and scientists gave an account of their observations. Experiments on animals prove that phenolic compounds found in fruit drops do not only prevent the formation of blood clots but they protect the vein wall by reducing the cholesterol and blood fat content of blood. Doctors found it important to point out that these substances may have a great role in preventing illnesses.

- *If we come to realize that we can complete our nourishment with flavonoids and at the same time the symptoms of illnesses become bearable or cease, or a patient lives further than was predicted, or certain illnesses do not even appear then we have to say that flavonoids are most significant substances.*

Flavin 7 is a non-medicine, nourishment supplementary product containing special vegetal immune substances, resveratrol, flavonoids and antioxidants in large quantities.
